Claims 1-12 and 15-27 are allowed.

Claims 30-33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 28, 29, 34, and 35 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over JP 59-124902 and Owens et al (US 2444266).

JP 59-124902 teaches a method for producing pectin comprising adding an aqueous solution of an acid and/or an inorganic salt into a plant pectin-containing material, heating, adding an alkaline agent, and separating (see entire translation, especially the Claims and Examples).

Owens et al teach a method for producing pectin comprising adding an aqueous solution containing an inorganic salt (i.e. sodium hexametaphosphate) into a plant pectin-containing material, adding an alkali agent, and separating (see entire patent, especially column 5, lines 1-10).

The claims appear to differ as to the swelling of the plant material.

The fiber content and viscosity swelling of the pectin product material would be no more inherent and/or obvious to that of JP 59-124902 and Owens et al because the same components are used.

As to claims 28, 29, 34, and 35, Applicant's arguments filed February 26, 2010 have been fully considered but they are not persuasive.

Applicant argues that neither JP 59-124902 nor Owens et al teach the claimed process.

Claims 28, 29, 34, and 35 are product claims. In product-by-process claims, the determination of patentability is based on the product itself. It is well-known that the patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is considered unpatentable even though made by a different process (In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985)).

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
